

1. Assign location of equipment considering the space requirement (impact area).
2. Excavate soil for ground anchors according to drawing.
Please note: To achieve maximum stability and safe installation, a moderate level of soil solubility is required.
3. Put the pre-assembled K&K Balance snake into the holes and align it by using a spirit level.
4. With light soil (soil classes 6-9 acc. to EN 1177, e.g. sand, bark mulch, fine gravel) it is essential to cover the ground anchors and the base plates with the size given (0,80x0,50x0,10m) by approx. 10 cm compressed concrete C20/25.
5. Backfill foundation holes and cover the play level with suitable material.
6. Release for play after the concrete foundations have set.
7. Please ensure that all special tools (e.g. special Allen key for secured Allen screws etc.) and all specific documents which are or may be useful for a safety management (e.g. invoice, delivery note, order acknowledgement, installation instructions, maintenance instructions) are forwarded to the persons responsible.
