Kenndaten:

Series 43:

The turntables are essentially made of a stainless steel structure with HPL 15 / 20 mm, as well as tamper-proof and dirt-proof rolling bearings.

The roller consists mainly of a stainless-steel framework with self-lubricating sliding bearings.

The jumping belt 0-46650-000 consists of a stainless steel frame, pivot bearing with self-lubricating sliding bearings and a belt.

The inner drum 0-45450-001 consists mainly of a galvanized steel frame with roller ring on roller bearings, HPL 15 mm and rubber-lined stainless steel rolling drum.

Series 52:

Balancing equipment is essentially comprised of a stainless steel structure.

The balancing equipment 52020, 52036 and 57012 do not put the user into a forced movement by using strong, special springs. The free fall heights are below 0.60 m, therefore, there are no special requirements with regard to the shock absorption characteristics of the base.

Devices 0-57014-001 to 0-57172-000 (see model sequence):
Playground equipment, support posts made of galvanized steel, powder-coated, Ø 121 x 4 mm, attachments and functional parts made of stainless steel, HPL and Robinia wood.

Tested according to:

DIN EN 1176-1:2017
EN 1176-1:2017
