

- 1. Assign a location for the equipment considering the space requirements.
- 2. Excavate soil for foundations, according to drawing.

 Please note: To achieve maximum stability and a safe installation, a moderate level of soil solubility is required.
- 3. Remove the transport locks! Otherwise, the holes for the foundations must respectively be enlarged (approx. $1,70 \text{ m} \times 0,50 \text{ m} \times 0,60 \text{ m}$).
- 4. Place the pre-assembled water scales into the foundation holes and align the device.
- 5. Grout foundations with compressed concrete C20/25, chamfer and round off the edges and cover foundations with surfacing material (acc. to EN 1176–1).
- 6. Release for play after concrete foundations have set.

Please take care that all special tools (e.g. special Allen key for secured Allen screws etc.) and all specific documents which are or may be useful for safety management acc. to EN 1176-7 (e.g. invoice, delivery note, order acknowledgement, installation instructions, maintenance instructions) are forwarded to the responsible persons.
