

(A) Installation with expansion anchors

1. Assign a location for the bench considering the space requirements.
2. Excavate soil for foundations, according to drawing.
3. After concrete foundations have set, drill holes for expansion anchors (according to manufacturer's instructions) - use base plate of bench supports as drilling jig.
4. Drive in bolts into holes and fasten the bench supports to the expansion anchors.

Tools: socket spanner 19 AF and hammer drill with drill bit Ø 12 mm

(B) (Optional) installation with ground anchorage

1. Assign a location for the bench considering the space requirements.
2. Excavate soil for foundations, according to drawing.
3. Fasten bench supports to ground anchors, put the unit into the foundation holes, align it and support it temporarily.
4. Grout foundations with compressed concrete C20/25 and cover them with sand, layer thickness 0,20 m.
5. Release for use after concrete foundations have set.

Tools: socket spanner 19 AF
